FOREWORD

Wet winters are our biggest nightmare at Sandown and this one has been the worst. 2021 was bad enough but this one was a shocker!

We are constantly striving to identify cattle that can perform consistently under adverse conditions. These last two winters are the very conditions that enable us to identify these performers.

Interestingly some cattle naturally withstand these pressures far better than others regardless of their performance records. These are the true stars and that is where we make progress.

Seven years ago we stopped trading cattle at Glenrachney, our Okains Bay steep hill country property, where a portion of the stud cows are run. This move lowered our biosecurity incursion risk markedly with the only outside stock entering being stud sires.

We have replaced the fattening operation with over 200 commercial hillbred Angus cows enabling us to progeny test our own genetics.

Like many of our clients we too are feeling the pressure of the release of national rules relating to protecting the environment. Farming is an ever-changing scenario and we have to adapt to running our businesses in a new way while integrating a range of advancing technology. We are fortunate to have our daughter, Sarah, working as the Principal Farm Systems Advisor for Environment Canterbury.

This is our 17th Spring Sale for the best of our 2 year old bulls – no 2yo bulls are sold prior to the auction. Our spring sale has been well received as many of them go into the high country where wintering a new bull can be difficult.

All our bulls are worked with dogs and we continue to run them in big mobs to create pressure akin to a commercial operation. While it is not conducive to presentation, it certainly sorts them out and helps their shifting and lasting ability.

FOREWORD *Cont.*

Our stud yearling heifers are mated to calve as 2 year olds using lower birthweight sires from our stud plus selected heifer mating bulls from other studs.

One of the great features of the Angus breed is the ability to perform in a wide range of environmental conditions. We feel the industry is experiencing a drift away from the emphasis on maternal ability towards a terminal solution.

The cow that has the ability to get in calf every year, and for a number of years, regardless of climatic variations, is your most valuable asset. We need the constitution, fertility, temperament and longevity in our Angus cattle if we are to hold onto our position in the industry with integrity.

We look forward to seeing you on Monday, October 3rd at our Sale or beforehand at our Open Day, Tuesday, September 27th from 1pm to 3pm.

Please join us for refreshments before and after our Sale.

Peter, Helen & Sarah Heddell

This sale will be hosted by bidr® (bidr.co.nz) as a HYBRID ON-FARM auction, with online bidding and a live-stream available for online purchasers.

All intending online purchasers must register with bidr® using an account held with one of the bidr® partner agencies in advance of the sale date.

The bidr® team is available to assist intending purchasers with signing up and registering - please call 0800 TO BIDR (0800 86 2437), or email enquiries@bidr.co.nz for assistance at any point.

Alternatively, contact your local bidr® representative:

CONDITIONS OF SALE

The sale will be conducted in accordance with the Conditions of Sale as laid down by the New Zealand Stock and Station Agents Association, a copy of which is exhibited at the sale.

HEALTH: The bulls being offered are from a Brucellosis and TbAccredited herd.

RECORDING: All Glen R Angus cattle are fully registered and performance recorded on Australasian Group Breedplan.

INSURANCE: Insurance cover is available from fall of hammer for both transit and period insurance with your stock firm who recommend these insurances to all purchasers.

FERTILITY GUARANTEE: Glen R. Angus has a 3 year full replacement fertility and structural soundness guarantee. If a bull entered should not possess a reasonable fertility, although not totally infertile, any dispute shall be settled by an arbitrator appointed by the auctioneer, and the award of such arbitrator shall be accepted as binding by the parties to the dispute.

The guarantee is based on a policy of a reducing credit, on a pro rata basis, of a third for each season, less the salvage value of the bull.

The salvage value of the bull is the property of the vendor.

The following conditions will apply:

1. In the case of a sale of a bull where a transfer is issued any complaint must be lodged by the purchaser with the Auctioneers of Vendor in writing within four calendar months from the date of purchase.
2. In the case of a bull where no transfer is issued any complaint must be lodged by the purchaser with the Auctioneers of Vendor in writing within six calendar months from the date of sale.
3. **TRIAL PERIOD:** In every case a trial period of twelve calendar months from date of the sale must be allowed to test the fertility of the bull.
4. That incapability due to injury from whatever cause or to illness or disease suffered or contracted after the date of sale is not covered by the guarantee.
5. That the purchaser shall throughout the guarantee period give the bull full and sufficient opportunity to prove that he is a good server and stock-getter or to demonstrate his ability to get stock whichever the case may be.
6. The purchaser shall throughout the trial period assure that the bull has proper care and attention and is maintained in good condition and health.
7. Failure on the part of the purchaser to observe or perform the foregoing conditions or any of them shall ender the undertaking void. The cost of taking delivery and returning a bull to a vendor shall be borne by the purchaser. AVeterinary Surgeons Certificate in the form prescribed by the Auctioneers shall be procured by the purchaser and submitted to the arbitrator if required by him. The undertaking is limited to the individual value of a bull as a breeder and does not extend to the loss of profits or otherwise sustained in the event of infertility or non-capacity being proved. The undertaking shall bind the executors or administrators of the vendor.

OCCUPATIONAL SAFETY: Whilst every care has been taken with regards to safety, please be aware of the normal dangers associated with stockhandling cattle and the associated facilities. No responsibility can be accepted for injury or damage to person(s) or their belongings for the duration of this sale.

DISCLAIMER: Although every care has been taken in compiling this catalogue to ensure accuracy, no responsibility is accepted for any error or omissions that may be included therein.

EBVs (Estimated Breeding Values)

EBVs are predictions of an animal's genetic merit based on available performance data on the individual and its known relatives. These values are expressed in units of measurement (e.g. kg) for each particular trait and are shown as positive (+) or negative (-) differences from the breed base.

The accuracy (Acc) percentage score indicates how much information has been used to calculate the EBV, ie the higher the percentage the more information that has been included. It is important to achieve a balance between different groups of traits and to place emphasis on traits important to your herd, your markets and your environment.

CALVING EASE DIRECT (CE-dir): Indicates the influence of the sire in purebred females calving as 2yr olds.

CALVING EASE DAUGHTERS (CE-dtrs): Indicates how easily that sire's daughters will calve as 2yr olds.

BIRTH WEIGHT (kg): Measured birth weight adjusted for dam age. The lower the value the less risk of birthing problems.

Mainly important when selecting sires to mate with heifers.

200 DAY MILK (kg): Estimates of genetic differences between animals in milk production potential, expressed through variation in calf growth performance. Not all environments will support high milking cows.

200 DAY GROWTh (kg): Measure of an animal's early growth to weaning.

More important if raising vealers and weaners.

400 DAY GROWTh (kg): Measure of genetic differences between animals in live-weight at 400 days.

Important when marketing yearlings.

600 DAY GROWTh (kg): Measure at 600 days.

Important for production of animals for heavy weight grass or grain fed markets.

SCROTAL CIRCUMFERENCE:

Increased scrotal size is associated with increased semen production in bulls and earlier age at puberty of bull and heifer progeny. Scrotal size also has a favourable relationship with Days to Calving, such that bulls with larger scrotal size EBVs tend to have daughters with shorter Days to Calving intervals.

SCANNING DATA: Angus GROUP BREEDPLAN uses data from ultrasound scanning of live animals and abattoir chiller assessment. This new grouping will take a year or two of data relayed to Armidale, NSW, to really determine suitable accuracies for breeding cattle for specific markets.

CARCASE WT EBVs (kg): Estimate of the genetic differences between animals in carcass weight, adjusted to 650 days of age.

EMA EBVs (Eye Muscle Area (cm²)): Measured at the 12/13th rib site on a standard 300kg carcass. EMA has a positive relationship with retail beef yield.

RIB FAT EBVs (mm) : Depth of fat at 12/13th rib site. More positive values indicate more subcutaneous fat and earlier maturity.

RUMP FAT EBVs (mm): Fat depth at the P8 site on the rump. The more positive the earlier maturity occurs.

RETAIL BEEF YIELD% (RBY%): Estimate of the genetic difference between animals in RBY% in a 300kg carcass.

IMF: Genetic estimate of intramuscular fat (marbling) 12/13th rib site in a 300kg carcass.

Self Replacing Index – SRI : Ranks bulls on their ability to generate profit in a herd situation. The index is expected to favour production of a cowherd with excellent reproductive efficiency, rearing progeny with moderate to high growth rates and high yielding carcasses.

ANGUS PURE INDEX : Similar to SR index but will tend to highlight higher marbling sires with progeny turnoff around 16-17mths of age.

MYCOPLASMA BOVIS

In regards to Mycoplasma bovis we are taking all possible precautions that we can:

1. We have double and triple fenced most boundaries.
2. We have not traded stock for 7 years.

The only stock bought in from outside, in the last 7 years, are stud sires and stud females.

3. Our stud bulls are only transported by one company that specifically specialises in moving stud cattle with strict washing procedures and all precautionary measures taken.
4. We have a footbath to wash boots in before entering the cattleyard complex – especially careful attention regarding vets and stock agents.
5. We have ceased showing cattle at all A & P Shows as we feel that there is too much risk.

TESTIMONIAL

We have been running Angus and Angus X cows at Flock Hill since 2005 using predominantly Glen R Angus Bulls.

Our association with Peter started prior to that when we grazed his bulls on a lease farm near Darfield. Having a large mob of stud bulls on the property gave me a good insight into how quiet and well behaved they were and Peter's no nonsense, no frills approach to their management was a pleasure to work with.

Peter kindly loaned us two bulls when we first came to Flock Hill on a 'buy later' arrangement – this created the nucleus of our herd today.

Flock Hill is a high country property with a very short growing season and a lot of native country. Consistently our number of dry cows is under 3%. The R1 cattle have been put to the bull for the last seven years and we have only had ONE dry heifer in that period. This season there are 280 cows going to the bull. We wean in April in time for the High Country Calf Sales at Coalgate and in 2018 had the heaviest pen of Steer Calves.

The Glen R bulls are hardy, low maintenance and quiet and have proved to have good longevity. Peter's passion for not only his animals but for what we are trying to achieve has been one of the key factors enabling us to grow a quality productive herd.

Richard & Anna Hill
Flock Hill Station

Your New Bull's Health and Well-Being

Your new bull will be pleased to get to his new home and the tranquil life of romancing cows rather than being jostled by his pushy male siblings!

- Unload him into a small pen of cows (or steers) and allow him to settle for a few days with them
- He is well used to handling, and a quiet human voice, so resist startling him with a poke (or heaven forbid, a cattle prodder!)
- He is used to being worked with dogs
- Fresh feed/hay/balage will continue to maintain his growth patterns and settle him
- After mating he will need lots of “TLC”, a good drench, good feed preferably running with a mate – then he will recharge his batteries for many more years of service
- We recommend an annual booster for BVD protection
- We really value CALM TEMPERAMENT in all our cattle and this will give you faster finishing cattle that are easier to work with in all respects
- The old saying “you look after him and he will look after you” is so very true of bulls – productivity AND longevity!!

Purchaser Price

Premier Bull cover

What is Premier Bull cover?

All bulls auctioned at this sale up to the value of \$50,000 will automatically be covered under FMG's Premier Bull cover for 14 days at no cost to the purchaser.

Length of cover

To extend cover for the specified bull beyond 14 days you need to tick Premier Bull cover 12 months on the Purchaser Instruction and Insurance Slip in this catalogue. The specified bull is then covered for the remaining period of 12 months. The premium is payable to FMG and is in addition to the purchase price of the bull.

If you require an alternative cover period talk to an FMG representative.

Your bull's value

Any bull covered under this policy must be purchased for \$50,000 or less. For any bull purchased over \$50,000 talk to an FMG representative.

During the period of insurance, the specified animal is covered for:

- Death or infertility as a result of accident, disease or illness.
- Transit.
- Theft.

What we will pay

Fair market value of your specified bull, less any amount you receive for the sale of the carcass, up to the amount shown on the insurance certificate.

Disclaimer

Please note this is only a summary of the product and is subject to our specific product documentation. For full details, you should refer to the policy document. You can get these documents, and any other information you need, from your FMG representative, by calling us or visiting our website.

YOU CAN RELY ON FMG TO STAND BY YOU. LITERALLY.

A bull is a big investment. Which is why FMG is right there with you to ensure you get the very best cover on sale day, and the best service every day after that. That's because we understand livestock insurance as much as we understand the importance of personal service. So talk to your FMG Rural Manager about FMG Premier Bull Sales cover. All bulls sold at auction up to \$50,000 can be covered for 6.5% of the purchase price and those sold at FMG Premier Bull Sales are insured at the fall of the hammer for 14 days free.* To find out more, call us on 0800 366 466 or visit fmg.co.nz/bulls

* Subject to standard underwriting criteria. Please note this is only a summary of FMG products and services and is subject to our specific product documentation. For full details, refer to the relevant policy wordings at fmg.co.nz

We're here for the good of the country.
