WELCOME

The Ranui team welcomes you to our 44th 2 year Bull sale.

Once again we are excited about the quality line-up of Angus Bulls that we have to offer in our sale on the 6th June at 3pm.

Ranui Angus is very conscious of the importance of continuing to build our herd genetically and have returned to doing embryo transplant (ET) work which enables us to use the best of our genetics.

Since July 2021, our stud records have been recorded with Angus Australia (AA). The AngusPRO group is a group of leading New Zealand Angus breeders who believe in the importance of offering scientifically proven facts to their clients to ensure that their bottom line and profitability is increased.

What are the changes for you?

To search for our animals you need go to the **AngusPRO** website (<https://anguspro.co.nz>) or if you give us a call or email and we can help you to search any animals.

Our TACE data is now compared with the Angus Australian cattle therefore our benchmarking is over a greater number of cattle. Angus Australia has updated our indexes to reflect New Zealand conditions and these are now known as Angus-Pro not Angus Pure. But we are still partners of Angus Pure.

As always the bull, that we have catalogued this year having been through rigorous assessments and are scientifically proven.

- Ranui Angus mates yearling heifers to calve as 2 years old
- All calves are weighed at birth
- All animals are DNA sire verified to guarantee the bull is by the sire nominated.
- All Ranui animals are i50k verified at birth for production traits & genetic traits.
- All bulls are Fertility Evaluated by Totally Vets
- All bulls are Ultrasound Scanned for carcass data
- All bulls are Beef Class Structurally assessed by an accredited assessor – Bill Austin

Bidr will be operating by their hybrid system.

We looking forward to seeing you on sale day and please don't hesitate to be in contact before if there is anything you wish to discuss.

Kind regards
Lindsay & Maria

CONDITIONS OF SALE

CONDITIONS FOR BULL AUCTIONS CONDUCTED LIVE AT A SALEYARD/ON FARM

All intending purchasers must register at the PGW Wrightson Ltd Livestock (PGW) sales office prior to the sale.

The New Zealand Stock & Station Agent's Association Conditions of Sale apply. These terms can be inspected at the registration desk and on the wall in the auction room.

PGW's Monthly Account Terms of Trade also apply to the extent deemed relevant by PGW. The current versions of PGW's Monthly Account Terms of Trade are also available online at:

www.pggwrightson.co.nz/Our-Company/Terms-and-Conditions or in hardcopy on request.

On behalf of the vendor, PGW will pay a purchasing rebate of 5% of the purchase price excluding GST, plus GST, to livestock companies and recognised independent livestock agents with a PGW Monthly Account who have introduced buyers to PGW before the sale and/or accompanied buyers to the sale.

1. Free delivery in the North Island for June delivery. All bulls left at Karamu are the purchaser's own risk and must be insured. Bulls may be held on request on the vendor's property until 30th June. Transport for July delivery bulls are at the expense of the purchaser.
2. Feet are sound and untrimmed.
3. The Ranui Stud is accredited and brucellosis and tuberculosis free herds and are mannanodosis tested clear (Status C10).
4. All bulls are service & semen tested.
5. All bulls are scanned for fat and meat content.
6. Deferred payment by arrangement.
7. All bulls have tested BVD negative and vaccinated.

RANUI GUARANTEE

All bulls are guaranteed for a period of three years for fertility and soundness.

FERTILITY: All bulls must pass a rigorous Service and Semen test for fertility before they make this catalogue. This test identifies and removes the bulls that are unfit for mating (See Totally Vets page for interpretation of fertility data).

SOUNDNESS: All bulls must pass a comprehensive examination of conformation, testicle, tone and size and structural soundness by Totally Vets. If for any reason a Ranui bull, within the 'Three Year Guarantee' period does not perform as a result of his own fertility or structural defect: excluding injury, we will: Refund the purchase price or the remaining portion of the 'Three Year Guarantee'.

DISCLAIMER: *Animal details included in this catalogue, including but not limited to pedigree, DNA information, Estimated Breeding Values (EBVs) and Index values, are based on information provided by the breeder or owner of the animal. Whilst all reasonable care has been taken to ensure that the information provided in this catalogue was correct at the time of publication, Angus Australia will assume no responsibility for the accuracy or completeness of the information, nor for the outcome (including consequential loss) of any action taken based on this information.*

CONDITIONS OF GUARANTEE

- Notify the breeder and discuss further action.
- Vet certificate of infertility or unsoundness must be sent to breeder.
- To notify breeder prior to disposing of bull (except for humane reasons) is imperative.

HEALTH AND SAFETY

Under the Health and Safety At Work Act 2015 we are required to advise people of possible hazards.

1. Cattle Movement
2. Vehicles and Machinery
3. Cattle Yards, Slippery Surfaces
4. Pavilion, Seating

Understanding the TransTasman Angus Cattle Evaluation (TACE)

What is the TransTasman Angus Cattle Evaluation?

The TransTasman Angus Cattle Evaluation is the genetic evaluation program adopted by Angus Australia for Angus and Angus influenced beef cattle. The TransTasman Angus Cattle Evaluation uses Best Linear Unbiased Prediction (BLUP) technology to produce Estimated Breeding Values (EBVs) of recorded cattle for a range of important production traits (e.g. weight, carcase, fertility).

The TransTasman Angus Cattle Evaluation is an international genetic evaluation and includes pedigree, performance and genomic information from the Angus Australia and Angus New Zealand databases, along with selected information from the American and Canadian Angus Associations.

The TransTasman Angus Cattle Evaluation utilises a range of genetic evaluation software, including the internationally recognised BLUPF90 family of programs, and BREEDPLAN® beef genetic evaluation analytical software, as developed by the Animal Genetics and Breeding Unit (AGBU), a joint institute of NSW Agriculture and the University of New England, and Meat and Livestock Australia Limited (MLA).

What is an EBV?

An animal's breeding value can be defined as its genetic merit for each trait. While it is not possible to determine an animal's true breeding value, it is possible to estimate it. These estimates of an animal's true breeding value are called EBVs (Estimated Breeding Values).

EBVs are expressed as the difference between an individual animal's genetics and a historical genetic level (i.e. group of animals) within the TACE genetic evaluation, and are reported in the units in which the measurements are taken.

Using EBVs to Compare the Genetics of Two Animals

TACE EBVs can be used to estimate the expected difference in the genetics of two animals, with the expected difference equating to half the difference in the EBVs of the animals, all other things being equal (e.g. they are joined to the same animal/s).

For example, a bull with a 200 Day Growth EBV of +60 would be expected to produce progeny that are, on average, 10 kg heavier at 200 days of age than a bull with a 200 Day Growth EBV of +40 kg (i.e. 20

kg difference between the sire's EBVs, then halved as the sire only contributes half the genetics).

Or similarly, a bull with an IMF EBV of +3.0 would be expected to produce progeny with on average, 1% more intramuscular fat in a 400 kg carcase than a bull with a IMF EBV of +1.0 (i.e. 2% difference between the sire's EBVs, then halved as the sire only contributes half the genetics).

Using EBVs to Benchmark an Animal's Genetics with the Breed

EBVs can also be used to benchmark an animal's genetics relative to the genetics of other Angus or Angus infused animals recorded with Angus Australia.

To benchmark an animal's genetics relative to other Angus animals, an animal's EBV can be compared to the EBV reference tables, which provide:

- the breed average EBV
- the percentile bands table

The current breed average EBV is listed on the bottom of each page in this publication, while the current EBV reference tables are included at the end of these introductory notes.

For easy reference, the percentile band in which an animal's EBV ranks is also published in association with the EBV.

Considering Accuracy

An accuracy value is published with each EBV, and is usually displayed as a percentage value immediately below the EBV.

The accuracy value provides an indication of the reliability of the EBV in estimating the animal's genetics (or true breeding value), and is an indication of the amount of information that has been used in the calculation of the EBV.

EBVs with accuracy values below 50% should be considered as preliminary or of low accuracy, 50-74% as of medium accuracy, 75-90% of medium to high accuracy, and 90% or greater as high accuracy.

Description of TACE EBVs

EBVs are calculated for a range of traits within TACE, covering calving ease, growth, fertility, maternal performance, carcase merit, feed efficiency and structural soundness. A description of each EBV included in this publication is provided on the following page.

UNDERSTANDING ESTIMATED BREEDING VALUES (EBVs)

Calving Ease/Birth	CEDir	%	Genetic differences in the ability of a sire's calves to be born unassisted from 2 year old heifers.	Higher EBVs indicate fewer calving difficulties in 2 year old heifers.
	CEDtrs	%	Genetic differences in the ability of a sire's daughters to calve unassisted at 2 years of age.	Higher EBVs indicate fewer calving difficulties in 2 year old heifers.
	GL	days	Genetic differences between animals in the length of time from the date of conception to the birth of the calf.	Lower EBVs indicate shorter gestation length.
	BW	kg	Genetic differences between animals in calf weight at birth.	Lower EBVs indicate lighter birth weight.
Growth	200 Day	kg	Genetic differences between animals in live weight at 200 days of age due to genetics for growth.	Higher EBVs indicate heavier live weight.
	400 Day	kg	Genetic differences between animals in live weight at 400 days of age.	Higher EBVs indicate heavier live weight.
	600 Day	kg	Genetic differences between animals in live weight at 600 days of age.	Higher EBVs indicate heavier live weight.
	MCW	kg	Genetic differences between animals in live weight of cows at 5 years of age.	Higher EBVs indicate heavier mature weight.
	Milk	kg	Genetic differences between animals in live weight at 200 days of age due to the maternal contribution of its dam.	Higher EBVs indicate heavier live weight.
Fertility	DtC	days	Genetic differences between animals in the time from the start of the joining period (i.e. when the female is introduced to a bull) until subsequent calving.	Lower EBVs indicate shorter time to calving.
	SS	cm	Genetic differences between animals in scrotal circumference at 400 days of age.	Higher EBVs indicate larger scrotal circumference.
Carcase	CWT	kg	Genetic differences between animals in hot standard carcase weight at 750 days of age.	Higher EBVs indicate heavier carcase weight.
	EMA	cm ²	Genetic differences between animals in eye muscle area at the 12/13th rib site in a 400 kg carcase.	Higher EBVs indicate larger eye muscle area.
	Rib Fat	mm	Genetic differences between animals in fat depth at the 12/13th rib site in a 400 kg carcase.	Higher EBVs indicate more fat.
	P8 Fat	mm	Genetic differences between animals in fat depth at the P8 rump site in a 400 kg carcase.	Higher EBVs indicate more fat.
	RBY	%	Genetic differences between animals in boned out saleable meat from a 400 kg carcase.	Higher EBVs indicate higher yield.
	IMF	%	Genetic differences between animals in intramuscular fat (marbling) at the 12/13th rib site in a 400 kg carcase.	Higher EBVs indicate more intramuscular fat.
Feed/Temp.	NFI-F	kg/day	Genetic differences between animals in feed intake at a standard weight and rate of weight gain when animals are in a feedlot finishing phase.	Lower EBVs indicate more feed efficiency.
	Doc	%	Genetic differences between animals in temperament.	Higher EBVs indicate better temperament.
Structure	Claw Set	score	Genetic differences in claw set structure (shape and evenness of claws).	Lower EBVs indicate a lower score.
	Foot Angle	score	Genetic differences in foot angle (strength of pastern, depth of heel).	Lower EBVs indicate a lower score.
	Leg Angle	score	Genetic differences in rear leg structure when viewed from the side (angle at front of the hock).	Lower EBVs indicate a lower score.
Selection Index	\$A	\$	Genetic differences between animals in net profitability per cow joined in a typical commercial self replacing herd using Angus bulls. This selection index is not specific to a particular market end-point, but identifies animals that will improve overall net profitability in the majority of commercial, self replacing, grass and grain finishing beef production systems.	Higher selection indexes indicate greater profitability.
	\$PRO	\$	Genetic differences between animals in net profitability per cow joined in a commercial self replacing herd based in New Zealand that targets the production of grass finished steers for the AngusPure programme. Steers are assumed marketed at approximately 530 kg live weight (290 kg carcase weight with 10 mm P8 fat depth) at 20 months of age, with a significant premium for steers that exhibit superior marbling.	Higher selection indexes indicate eater profitability.

BEEFCLASS STRUCTURAL ASSESSMENT

How to use:

The Beef Class Structural Assessment System uses a 1-9 scoring system for feet and leg structure:

- A score of 5 is ideal
- 4 and 6 show slight variation from ideal, but this includes most animals. Any animal scoring 4 and 6 would be acceptable in any breeding program
- 3 and 7 shows greater variation, but would be acceptable in most commercial breeding programs, however seedstock producers should be wary
- 2 and 8 are low scoring animals and should be looked at carefully before purchasing

A 1-5 scoring system is used for sheath attachment. For feet and leg assessment, animals need to be on a hard, flat and even surface where animal can move/stand naturally.

Traits:

	<i>Scoring Range</i>	<i>Description</i>
Front Feet Claw Set	1 - 9	1 - open divergent; 5 - good; 9 - extreme scissor claw
Rear Feet Claw Set	1 - 9	1 - open divergent; 5 - good; 9 - extreme scissor claw

Reference: Shape (primarily curl) and evenness of the claw set.

Front Feet Angle	1 - 9	1 - steep (stubbied toe); 5 - good; 9 - shallow heel
Rear Feet Angle	1 - 9	1 - steep (stubbied toe); 5 - good; 9 - shallow heel

Reference: Strength of pastern, depth of heel and length of foot.

Rear Legs Side View	1 - 9	1 - straight (post legged); 5 - good; 9 - sickle hocked
----------------------------	-------	---

Reference: Angle measured at the front of the hock.

Rear Leg Hind View	1 - 9	1 - bow legged; 5 - good (parallel); 9 - cow hocked
---------------------------	-------	---

Reference: Direction of the feet when viewed from the rear.

Muscle Score: A - E (includes + and -)

- A+ = Double-muscled
- A = Extremely heavy muscle
 - pronounced creasing between muscles
- B = Heavily muscled
 - well rounded hindquarter
- C = Average muscle
 - hindquarter slightly rounded
- D = Poor muscle
 - narrow concave hindquarter
- E = Extremely poor muscle
 - angular

Reference: Primarily hindquarter roundness or convexity, width across the stifle and width of stance. Also width and muscle expression across the back, particularly behind the shoulder and in the loin. Jump muscle (about the P8 site) and forearm bulge may be taken into consideration.

Sheath and Naval Scores 5 - 1 5 - extremely clean/tight to body; 1 - extremely pendulous

Reference: Sheath attachment

Temperament

Reference: 1-5 (half scores permitted) using yard test scale below:

1. Docile
The animal is easily held in the corner and the handler can get close enough to put their stick on the animal.
2. Restless
The animal can be held in the corner but exhibits some restlessness and flicking of the tail. The handler cannot get close enough to put their stick on the animal before it moves away.
3. Nervous
The animal is not easily held in the corner even when the handler is some distance back from the animal, continual movement and tail flicking.
4. Flighty (wild)
The animal cannot be held in the corner, frantically runs the fence line and may jump when penned individually, exhibits long flight distance.
5. Aggressive
Similar behavior to score 4 but is also aggressive towards the handler, stares at the handler and threatens to charge or charges (Handler is advised to exit the yard before the animal actually charges).

**Everyone in the industry knows
that profitability within a cattle
system can be improved by
making educated predictions
with factual data.
It's scientifically proven.**

AngusPRO are a group of New Zealand Angus studs that encompass over 40% of New Zealand's registered Angus cattle. These studs have united and made the shift across the ditch, to join the progressive governing body that is Angus Australia.

Angus Australia pride themselves on their quality of leadership in the delivery of innovative programs that will enhance and promote the value of Angus cattle and beef.

ANGUSPRO INDEX DEVELOPED SPECIFICALLY FOR THE NEW ZEALAND FARMING SYSTEM AND MARKETS

Selection indexes have been published within the TransTasman Angus Cattle Evaluation for several decades and have made an important contribution to the genetic improvements that have been achieved within the Angus breed during this time.

Selection indexes aid in the selection of animals for use within a breeding program where there are several traits of economic or functional importance by providing an overall "score" of an animal's genetic value.

Selection indexes are calculated for a specific breeding purpose and are calculated based on weightings placed on individual traits that are deemed to be important for that purpose.

The selection indexes assist in making "balanced" selection decisions, taking into account the relevant attributes of each animal to identify animals with genetics that are most aligned with the breeding objective for the given selection scenario.

The selection indexes published within TransTasman Angus Cattle Evaluation are economic selection indexes and are derived using BreedObject software, as developed by the Animal Genetics & Breeding Unit (AGBU) in Armidale, NSW.

Ten indexes are currently published as part of the TransTasman Angus Cattle Evaluation. Of these, the Angus Breeding and Angus Breeding Low Feed Cost selection indexes are general purpose selection indexes that are suitable for use in the majority of commercial beef operations, while the AngusPRO selection index is specific to New Zealand production systems and beef markets.

AngusPRO Index (\$PRO)

Selection Index Summary

- New Zealand production system
- Self replacing herd
- Daughters are retained for breeding
- Steer progeny are finished on pasture for the Angus-Pure programme
- Steer progeny slaughtered at a carcass weight of 290 kg at 20 months of age
- Significant premium for steers that exhibit superior marbling

The AngusPRO index (\$PRO) estimates the genetic differences between animals in net profitability per cow joined in a commercial self-replacing herd based in New Zealand that targets the production of grass finished steers for the AngusPure programme.

Daughters are retained for breeding and therefore female traits are of importance.

Steers are assumed marketed at approximately 530kg live weight (290kg carcass weight with 10mm P8 fat depth) at 20 months of age, with a significant premium for steers that exhibit superior marbling.

Traits Contributions

Figure 1 shows the traits that are considered in the \$PRO index, and how much they contribute to the overall balance of the selection index. The larger the segment, the greater the impact on the Selection Index.

Selection Advantage

Figure 2 shows the selection advantage if animals are selected using the \$PRO index.

The selection advantage is calculated by ranking well-used sires within the Angus breed on the \$PRO index, and comparing the average EBVs of the sires in the highest 10% with the average EBVs of all sires from which they were selected. For example, the sires ranked in the highest 10% based on the \$PRO index had 9kg higher 400 Day Weight EBVs and 1.2kg lower Birth Weight EBVs than the average EBVs of the sires from which they were selected.

The selection advantage is indicative of the long-term direction and relativity of response that will occur in individual traits if selection is based on the \$PRO index. The actual response that is observed will vary depending on the features of the individual breeding program.

A feature of the \$PRO index is a selection advantage of close to zero for mature cow weight, meaning that selection on this index will maintain mature cow weight, while still increasing growth to 200, 400 and 600 days of age.

Figure 2 - Selection Advantage for the AngusPRO Index

BULL FERTILITY EVALUATION

The bulls listed on the following page have met the following parameters that are required to pass the Tararua Breeding Centre Bull Fertility Evaluation carried out on behalf of:

Lindsay & Maria Johnstone

of

Ranui Livestock Limited

at

Kai Iwi

Monday, 4 March 2024

Libido

Bulls must demonstrate the ability to mount an "in season" heifer or cow.

Penile Soundness

Each bull's extended penis is examined during mounting for structural soundness, injuries and abnormalities.

Semen Evaluation

Each bulls ejaculate, which is collected by artificial vagina, is examined microscopically for volume, density, motility and morphology and must pass the minimum standards of 75% normal

Scrotal Palpation

Each sires testicles are palpated in order to detect any abnormalities.

Scrotal Circumference

Each sires scrotal circumference is measured.

Regard

Lucas Reina
Bovine Reproduction Consultant

ANGUSPURE PARTNER STUD

AngusPure NZ has teamed up with 91 Angus studs who share in our vision - to focus on the end consumer. This stud is proud to be named as one of them, and by using the finest genetics and implementing best management practice they can help you produce more premium quality Angus beef.

Only our AngusPure Partner studs display these devices in their sale catalogues. They indicate bulls endorsed by AngusPure NZ.

ANGUSPURE ENDORSED BULLS

AngusPure NZ continues to endorse bulls for sale that are either at or above +\$125 for the AngusPure index (API) and at or above \$115 for the AngusPRO index (PRO). These indexes give commercial farmers confidence that by using these selection tools, bulls are most likely to leave progeny with superior carcase quality. At the same time they achieve desirable outcomes for self replacing herds, as the AngusPure & AngusPRO indexes still reward cattle with strong maternal attributes like calving ease, scrotal and growth, along with carcase weight.

To qualify, bulls will be => +\$125 for AngusPure index OR => +\$115 for AngusPRO index

EXTRA ANGUSPURE ENDORSEMENT FOR MARBLING

In addition to the 'A', and to assist bull buyers who wish to select for more marbling AngusPure are rewarding those animals that are either at or above +\$145 for the AngusPure index and at or above \$135 for the AngusPRO index. In addition to this they must have an IMF EBV (for marbling) equal to or greater than +2.2. These bulls will be awarded an 'A+' endorsement. Marbling is one of the very highest eating quality attributes and is necessary in order to meet some of the highest premium requirements for the export program, AngusPure Special Reserve.

To qualify, bulls will be => +\$145 for AngusPure index OR => +\$135 for AngusPRO index, and in addition all bulls must be => +2.2 for IMF EBV

AngusPure NZ recognises the need to lift the amount of marbling in our New Zealand cow genetics, in order to fill the requirements of consumers going forward. Marbling has two critical components; genetics and feeding. Feeding on a rising plane of nutrition is vital but without the genetics these attributes will not be able to express themselves.

Unable to make the sale?

Buy online on bidr® in 3 easy steps:

1

Sign up at **bidr.co.nz** and add your agency account under account details.

2

Browse auctions to find livestock you are interested in buying.

3

Login and register for the real time online auction to bid for the livestock you wish to purchase.

Our partner agencies:

Why use bidr®?

- Free to sign up
- Nationwide reach
- Bid from anywhere
- View auctions and sales results
- Pay for your purchases through your livestock agency account

Contact your bidr® Representative to sign up at **bidr.co.nz**

YOU CAN RELY ON FMG TO STAND BY YOU. LITERALLY.

A bull is a big investment. Which is why FMG is right there with you to ensure you get the very best cover on sale day, and the best service every day after that. That's because we understand livestock insurance as much as we understand the importance of personal service. So talk to your FMG Rural Manager about FMG Premier Bull Sales cover. All bulls sold at auction up to \$50,000 can be covered for 6.5% of the purchase price and those sold at FMG Premier Bull Sales are insured at the fall of the hammer for 14 days free.* To find out more, call us on 0800 366 466 or visit fmg.co.nz/bulls

* Subject to standard underwriting criteria. Please note this is only a summary of FMG products and services and is subject to our specific product documentation. For full details, refer to the relevant policy wordings at fmg.co.nz

We're here for the good of the country.

FMG Premier Bull Sale Insurance

FMG

Advice & Insurance

What is FMG Premier Bull Insurance?

FMG provides automatic insurance for all bulls auctioned at an FMG Premier Bull Sale up to the value of \$50,000 for 14 days at no cost to the purchaser.
For any bull purchased over \$50,000 talk to an FMG representative.

What is the length of cover?

You will automatically be insured for the specified bull for 14 days. You also have the option to extend the length of insurance to 12 months. Simply tick the “Extend your Premier Bull Insurance” option on the Purchaser Slip. The specified bull is then insured for the remaining period of 12 months at **7.6%** of the purchase price (the sum insured for the bull). If you would like to discuss an alternative timeframe, please have a chat with your local FMG representative.

You don’t have to pay today, FMG will invoice you for this additional cover.

What are the benefits?

✓ Infertility	Cover if your specified bull has to be euthanised due to permanent infertility caused by certain accidents, disease, or illness.
✓ Theft or death	We cover your specified bull for theft or death caused by certain accidents, disease, injury, or illness (including while in transit anywhere in New Zealand).
✓ Vet costs	We cover up to \$500 for treatment of your specified bull to prevent death.

What will FMG pay?

FMG will pay the fair market value of your specified bull, less any amount you receive for the sale of the carcass, up to the amount shown on the insurance certificate.

Please complete this slip and hand to the Booking Clerk before leaving the sale. This slip **MUST** be fully completed to be eligible for the 14 days free Premier Bull Insurance.

Purchaser/Agent full name:	If purchasing on behalf of, what is your relationship to owner?	Buyer No:
