# FOREWORD

*The team at Shian welcome you to the 2024 bull sale.*

*Firstly we would like to thank everyone for their ongoing support both with purchasers & underbidders. It's always very much appreciated and keeps us doing what we love also.*

*It's been another kind summer/autumn for our region, rained when we've needed it and a warm autumn so far to keep the grass ticking along nicely. It's been a funny old time in the farming industry, with interest rates rising and the lamb market not as flash as it could be. However it's good to see the weaner and 18 month cattle market holding firm with good prices in particularly Angus cattle. Luckily we farmers are a resilient bunch and will work through these tough times and come out the other side okay.*

*We have invested heavily in recent years in some top new genetics and it's certainly paid off with them crossing well with our strong Shian genetics. Not only in this years sale bulls but the coming years with Taimate Major (flush brother to Roy) having sons next year.*

*This years line up, we are excited to put forward a real even line of structurally sound, deep, meaty bulls with a bit of data to match. New sires for this years bulls include KJ BigMac purchased for \$56K and Tangihau Thumper \$45K, these bulls have definitely left their mark not only in the bulls but leaving a beautiful line of females to match. Waiterenui Brickyard was purchased as a yearling for heifer mating and he has some good moderate framed solid bulls scattered through the sale also. This year marks the last of Mako / Ranger sons and they have definitely left some of their best for last!*

*We look forward to seeing you on sale day and invite you to join us for a BBQ and refreshments after the sale.*

## ABOUT US

*The property of 757 hectares is located 11 kilometres southeast of Taumarunui in the King Country. This land is classed as medium hill country being clay-mudstone type soil and the balance of flats being pumice soil along with a few river flats.*

*Shian Angus was established in 1972 by Brian and Sharon with the purchase of two stud heifers from the Lairdvale Stud.*

*Shian Stud consists of an Angus Stud, Romdale Stud, South Suffolk sheep studs, and commercial stock. All of which are run by the partnership of Brian & Sharon Sherson and their son Rob and wife Tracy Sherson under the name of Shian Farms.*

*At present we run approximately 250 stud cows. All females going into the herd are calved as two year olds. In October we select out yearling bulls that are good heifer mating options and sell through private treaty. The cattle we aim to breed are well framed, fertile, quiet cattle with structural soundness and a good balance of EBV's.*

*We also run two flocks of stud sheep consisting of 250 South Suffolk ewes and 350 Romdales, with the Romdales being bred for eczema resistance.*

*Annually in November we hold an on-farm auction where we put up approximately 85 eczema tested Romdales, 70 South Suffolks & 20 Southdown x South Suffolk rams for auction. The key factors we are aiming to breed in our flocks are structural soundness, good doing ability, packed full of meat, along with good fertility, with both flocks scanning close to 190 % each year.*

*On the commercial side of things we run 1000 flock ewes and buy in 2500 fattening lambs, along with 300 yearling steers with 100 of these being taken through and the surplus traded at 18 months.*

## FERTILITY GUARANTEE

The entry of a bull in the catalogue *ipso facto* carries with it an undertaking by the vendor that the purchase price (without interest, expense costs or damages) will be refunded should the bull prove totally infertile or incapable of service. If a bull so entered should not possess a reasonable fertility, although not totally infertile, any dispute shall be settled by an arbitrator appointed by the auctioneers and the award of such arbitrator shall be accepted as final and binding by the parties to the dispute. Any complaint must be lodged with the Vendor in writing within six (6) calendar months of the date of the sale. The cost of taking delivery of and returning a bull to the Vendor shall be borne by the purchaser. A veterinary surgeon's certificate shall be produced by the purchaser when required. The undertaking is limited to the individual value of a bull as a breeder and does not exceed to the loss of profits or otherwise sustained in the event of infertility or non-capacity being proved. The undertaking shall bind the executors or administrators of a vendor.

**TRIAL PERIOD:** In every case a trial period of twelve calendar months from the date of sale must be allowed to test the fertility of the bull.

The incapacity due to injury from whatsoever cause or to illness or disease suffered or contracted after the date of sale is not covered by the guarantee.

That the purchaser shall throughout the guarantee period give the bull full and sufficient opportunity to prove that he is a good server and stockgetter or to demonstrate his ability to get stock whichever the case may be.

The purchaser shall throughout the trial period assure that the bull has proper care and attention and is maintained in good condition and health.

Failure on the part of the purchaser to observe or perform the foregoing conditions or any of them shall render the undertaking void.

04/04/2024

## Fertility Testing Report

All sale bulls were fertility tested on farm at Shian Angus on 19th March 2024 and have passed a fertility test with semen satisfactory for breeding potential.

They have passed the following:

1. Palpation and examination of testicles
2. The penis and sheath have been examined for any apparent abnormality e.g. sores, lacerations, abscesses, hair rings, warts, corkscrew, scar tissue and signs of damage
3. Microscopic evaluation of the semen sample has been tested for motility % of live sperm morphology % of normal vs abnormal within the sperm

All bulls have been presented to me in very great condition and in a healthy state.

Darren Williams  
Manager

0272880980

## **DELIVERY**

Delivery of bulls will be free within the North Island at the Vendor's convenience.

## **INSURANCE**

We recommend purchasers to insure their bulls on the day of sale.

## **COMMISSION**

All intending purchasers are required to register at the sales office prior to the sale. A purchasing rebate of 6% will then be paid to non-participating livestock companies and recognised independent livestock agents with approved credit facilities introducing new and/or accompanying buyers to the sale. Arrangements must be made prior to the sale and settlement made on the purchasers behalf within 14 days.

## **G.S.T**

All Lots plus G.S.T

## **CONDITIONS OF SALE**

1. The Sale will be conducted under the Rules and Regulations of the N.Z. Stock and Station Agents' Association as posted on to rostrum.
2. Transfer fees are payable by the purchasers except in the case of cattle sold for export, when the transfer fee is payable by the Vendor.
3. Purchaser of Cattle for export to contact Vendor prior to sale to confirm health tests required.
4. All transfers must be signed on the day of sale.
5. All cattle become the purchaser's responsibility from the fall of the hammer.
6. TB free herd C10 status.
7. Genetic Defects -
  - AM (Arthrogryposis Multiplex)
  - NH (Neuropathy Hydrocephalus)
  - CA (Contractural Arachnodactyly)
  - DD (Developmental Duplication)All bulls have been texted free of these genetic defects.
8. All Shian bulls sold in this catalogue are guaranteed for three years from the date of purchase for fertility and structural soundness. This means if for any reason the bull does not perform due to his fertility or there is a structural soundness defect (excluding injury, disease or poor management of the purchaser) during the guaranteed period Shian will refund the purchaser on a proportional basis with 1/3 of the sold sale price being deducted for each year since purchased (less the slaughter price realised). Vet certificate must be supplied for proof of refund.
9. Shian retains the right to 100 semen straws from any bull in this catalogue at any time in the future for within heard use only.
10. All bulls are 50K.

# CARING FOR YOUR BULL

When your bull arrives home it is a good idea to have company for him, preferably a steer or cow as he is used to being run in a mob. Shian bulls are not used to horses but are used to being worked with motor bikes and dogs, they also respect electric fences.

## HAZARDS

Under Health and Safety Regulations please make yourself aware of the following hazards

- 1. Cattle Movements
- 2. Work Vehicles
- 3. Cattle Yards, Slippery Surface
- 4. Grandstand Steps
- 5. Woolshed Steps
- 6. Bull Sale Area
- 7. No Children in pens with bulls

## EBV's

An animal's breeding value is its genetic merit, half of which will be passed on to its progeny. While we will never know the exact breeding value, for performance traits it is possible to make good estimates. These estimates are called Estimated Breeding Values (EBVs).

Although EBVs provide an estimate of an animal's genetic merit for a range of production traits, they do not provide information for all of the traits that must be considered during selection of **functional** animals. In all situations, EBVs should be used in conjunction with visual assessment for other traits of importance (such as structural soundness, temperament, fertility etc).

**Calving Ease EBVs (%)** are based on calving difficulty scores, birth weights and gestation length information. More positive EBVs are favourable and indicate easier calving.

**CE % Direct** = Direct Calving Ease—The EBV for direct calving ease indicates the influence of the sire on calving ease in purebred females calving at two years of age.

**CE % Daughters** = Daughters' Calving Ease—The EBV for daughters' calving ease indicates how easily that sire's daughters will calve at two years of age.

**Gestation Length EBV (days)** is an estimate of the time from conception to the birth of the calf and is based on AI and hand mating records. Lower (negative) GL EBVs indicate shorter gestation length and therefore easier calving and increased growth after birth.

**Birth Weight EBV (kg)** is based on the measured birth weight of progeny, adjusted for dam age. The lower the value, the lighter the calf at birth and the lower the likelihood of a difficult birth. This is particularly important when selecting sire for use over heifers.

**200-Day Growth EBV (kg)** is calculated from the weight of progeny taken between 80 and 300 days of age. Values are adjusted to 200 days and for age of the dam. This EBV is the best single estimate of an animal's genetic merit for growth to early ages.

**400-Day Weight EBV (kg)** is calculated from the weight of progeny taken between 301 and 500 days of age, adjusted to 400 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for yearling weight.

**600-Day Weight EBV (kg)** is calculated from the weight of progeny taken between 501 and 900 days of age, adjusted to 600 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for growth beyond yearling age.

...

**Mature Cow Weight EBV** (kg) is based on the cow weight when the calf is weighed for weaning, adjusted to 5 years of age. This EBV is an estimate of the genetic difference in cow weight at 5 years of age and is an indicator of growth at later ages and potential feed maintenance requirements of the females in the breeding herd. Steer breeders wishing to grow animals out to a larger weight may also use the Mature Cow Weight EBV.

**Milk EBV** (kg) is an estimate of an animal's milking ability. For sires, this EBC indicates the effect of the daughter's milking ability, inherited from the sire, on the 200-day weights of her calves. For dams, it indicates her milking ability.

**Scrotal Size EBV** (cm) is calculated from the circumference of the scrotum taken between 300 and 700 days of age and adjusted to 400 days of age. This EBV is an estimate of an animal's genetic merit for scrotal size. There is also a small negative correlation with age of puberty in female progeny and therefore selection for increased scrotal size will result in reduced age at calving of female progeny.

**Days to Calving EBV** (days) indicates the fertility of the daughters of the sire. It is the time interval between the day when the female is first exposed to a bull in a paddock mating to the day when she subsequently calves. A negative EBV for days to calving indicated a shorter interval from bull-in date to calving and therefore higher fertility.

**Carcase Weight EBV** (kg) is based on abattoir carcase records and is an indicator of the genetic differences in carcase weight at the standard age of 750 days.

**Eye Muscle Area EBV** (sq cm) is calculated from measurements from live animal ultra-sound scans and from abattoir carcase data, adjusted to a standard 400kg carcase. This EBV estimates genetic differences in eye muscle area at the 12/13th rib site of a 400kg dressed carcase. More positive EBVs indicate better muscling on animals. Sires with relatively higher EMA EBVs are expected to produce better-muscled and higher percentage yielding progeny at the same carcase weight than will sires with lower EMA EBVs.

**Rib Fat and Rump Fat EBVs** (mm) are calculated from measurements of subcutaneous fat depth at the 12/13th rib site and the P8 rump site (from live animal ultrasound scans and from abattoir carcasses) and are adjusted to a standard 400kg carcase. These EBVs are indicators of the genetic differences in fat distribution on a standard 400kg carcase. Sires with low, or negative, fat EBVs are expected to produce leaner progeny at any particular car-case weight than will sires with higher EBVs.

**Retail Beef Yield EBV** (%) indicates genetic differences between animals for retail yield percentage in standard 400kg carcase. Sires with larger EBVs are expected to produce progeny with higher yielding carcasses.

**Intramuscular Fat EBV (%)** is an estimate of the genetic difference in the percentage of intramuscular fat at the 12/13th rib site in a 400kg carcass. Depending on market targets, larger more positive values are generally more favourable.

### **Selection Indices**

There are currently three different selection indexes calculated for New Zealand Angus animals. These are Self Replacing Index, AngusPure Index and Heifer/Dairy Terminal Index. Each selection index describes a different production/market scenario and relates to a typical commercial herd using Angus bulls. Producers are advised to use the selection index that most closely aligns to their production system. Each selection index is focused on efficient beef production, including maternal traits where appropriate. In addition, each selection index targets the following specifications.

**Self Replacing Index (SRI)** - Estimates the genetic differences between animals in net profitability per cow joined in an example self-replacing commercial herd that targets the production of grass finished steers. Steers are assumed marketed at approximately 480 kg live weight (265 kg carcass weight and 7 mm fat depth) at approximately 16 months of age. Selected heifers are retained for breeding and the balance marketed at approximately 16 months weighing 415 kg (230 kg carcass weight and 8 mm fat depth). As some daughters are retained, maternal traits are also of importance.

**AngusPure Index (API)** - Estimates the genetic differences between animals in net profitability per cow joined in an example self-replacing commercial Angus herd that targets the production of grass finished steers for the AngusPure programme. Steers are assumed marketed at approximately 530 kg live weight (290 kg carcass weight and 10 mm fat depth) at approximately 20 months of age. Selected heifers are retained for breeding and the balance marketed at approximately 20 months weighing 450 kg (240 kg carcass weight and 10 mm fat depth). A significant premium for carcass quality was assumed and, as some daughters are retained, maternal traits are also of importance.

**Heifer/Dairy Terminal Index (HDT)** - Estimates the genetic differences between animals in net profitability per female joined in an example herd where all progeny are marketed. All progeny are marketed at approximately 510 kg live weight (280 kg carcass weight and 7 mm fat depth) at approximately 24 months of age.

The index values are derived using BreedObject technology. More information is available from the BreedObject Website.

A full explanation of EBV's will be on display on sale day.

## Wishing Shian Angus a very successful sale

Allflex wet TSUs provide a **quick and easy DNA sampling** method to test parentage and genetic traits. Replace tail hair sampling with our **reliable, user friendly solution**.

### ALWAYS ASK FOR ALLFLEX.

Allflex is the number one solution for intelligent visual and electronic livestock identification and management systems.

Learn about how our electronic and visual ID tags, readers, applicators and tissue sampling units can make life easier on farm.

Visit [allflex.co.nz/about-us/meet-the-team](http://allflex.co.nz/about-us/meet-the-team) to contact your local sales representative.

FOUR WORLD-FIRST FORMULAS.  
THREE TARGETED STAGES OF GROWTH.  
AND A WEALTH OF KIWI INGENUITY IN EVERY COMBINATION.

## TURBO® CATTLE DRENCH PROGRAMME

### STAGE 1

TURBO® Initial  
Oral Drench

First oral drench treatment for weaned calves. Protect against worm parasites and bridge the gap between removal of coccidiostat meal and natural coccidiosis immunity.

### STAGE 2

TURBO® Advance  
Oral Drench

Routine treatment of growing cattle that can be drenched orally. Can be used in cattle under 120kg.

### STAGE 3

TURBO® Pour On  
or Injection

Routine treatment for growing cattle that are too big to be drenched orally. Rain resistant pour-on and injectable options with the added benefit of lice control.

# NOTES

# NOTES

# NOTES

**What is FMG Premier Bull Insurance?**

FMG provides automatic insurance for all bulls auctioned at an FMG Premier Bull Sale up to the value of \$50,000 for 14 days at no cost to the purchaser.  
For any bull purchased over \$50,000 talk to an FMG representative.

**What is the length of cover?**

You will automatically be insured for the specified bull for 14 days. You also have the option to extend the length of insurance to 12 months. Simply tick the “Extend your Premier Bull Insurance” option on the Purchaser Slip. The specified bull is then insured for the remaining period of 12 months at **7.6%** of the purchase price (the sum insured for the bull). If you would like to discuss an alternative timeframe, please have a chat with your local FMG representative.

You don’t have to pay today, FMG will invoice you for this additional cover.

**What are the benefits?**

✓ <b>Infertility</b>	Cover if your specified bull has to be euthanised due to permanent infertility caused by certain accidents, disease, or illness.
✓ <b>Theft or death</b>	We cover your specified bull for theft or death caused by certain accidents, disease, injury, or illness (including while in transit anywhere in New Zealand).
✓ <b>Vet costs</b>	We cover up to \$500 for treatment of your specified bull to prevent death.

**What will FMG pay?**

FMG will pay the fair market value of your specified bull, less any amount you receive for the sale of the carcass, up to the amount shown on the insurance certificate.

# Bull Purchaser Instruction and FMG Insurance Slip

Please complete this slip and hand to the Booking Clerk before leaving the sale. This slip **MUST** be fully completed to be eligible for the 14 days free Premier Bull Insurance.

Purchaser/Agent full name: If purchasing on behalf of, what is your relationship to owner? Buyer No:

FMG Client Account Number: Purchaser's full name: Purchaser's DOB:    /    /

Purchaser's email: Purchaser's phone: Farm/business name:

Purchaser's postal address: Post code: NAT No.:

Delivery address: Stock firm to be charged:

Lot:	Tag:	\$	Breed:	DOB:	Transport instructions:

**Period of FMG Insurance** ☐ Tick here to extend your Bull Insurance to 12 months @ 7.6% of the purchase price of your bull. *This will extend the cover beyond the initial 14 days free cover for the remaining period of 12 months.*

If you do not wish to be contacted by FMG in the future to discuss other products and services please tick here: ☐

I acknowledge and agree for my personal information contained in this Purchaser Instruction and Insurance Slip to be shared between the parties involved in this bull sale, including but not limited to the vendor or their representatives, livestock agencies, transport operators and FMG. The information is shared for the purpose of completing the sale and purchase of the bull, including insurance with FMG.

# INTRODUCING

## YOU'LL NEVER LOOK AT YOUR HEIFERS THE SAME WAY AGAIN!

### THE COST OF THE UNKNOWN

VS.

### THE BENEFIT OF KNOWING

An innovative, multi-breed genomic test providing **predictions for commercial females.**

Predictions provide genetic insights **to help make better replacement selection and breeding decisions.**

#### FEATURES

##### 3 Economic Indexes

Ranks females from highest potential return to lowest using GEPD and economic assumptions specific to New Zealand cattle producers.

##### 19 GEPDs

Informs indexes and enables specific selection, breeding and marketing decisions that can be tailored to your herd.

##### Percent Ranks

Benchmarks females against other commercial animals in the evaluation. Easily identify strengths and weakness of cow herd.

##### Parentage

Sire parentage contributes to the accuracy of GEPD, assess sire performance and prevent inbreeding.

##### Breed Composition

Indicates maternal heterosis to inform selection and breeding decisions.

#### BENEFITS

For more information contact Zoetis Beef Specialist - Amy Hoogenboom
